

## PROJECT CASE STUDY

### Multi-Color Corporation

Established in 1916 with approximately 5,000 dedicated employees, **Multi-Color Corporation** (MCC) operates 47 state-of-the-art industrial printing and manufacturing facilities worldwide. Formerly known as Collotype Labels, MCC invited **Kellwood** to update their Glasgow facility with an energy efficient lighting system.

#### Challenges

MCC operate in an industry where even the slightest label imperfection can have catastrophic consequences for a global supply chain. Their lighting requirements exceed most other sectors accordingly. The headline design requirement was to be a  $\geq 1000\text{Lux}$  target, project area light level and excellent uniformity while using existing electrical infrastructure

#### Solution

Kellwood believe the efforts made to balance the client's budget with available product capabilities proved to be a key in winning MCC's work. The flexibility of an intelligent lighting system was abandoned in favour of high output. The results remain impressive to this day.
