

PROJECT CASE STUDY

NHS Scotland

The Kellwood Group's electrical and lighting divisions were recently employed by NHS representatives to provide patient-focused, supply-and-installation services. The facility in question was a new healthcare complex being built / partially refurbished near the English-Scottish border. Located on Crichton Campus, Dumfries, Cree North offers patients short-to-medium term, psychiatric support services. To better support individual patient recuperation, Kellwood's design team specified strategic areas feature supporting intelligent controls. This meant patients and staff could choose ambient light levels to suit them. Work included reception areas, waiting rooms, wards, offices, bedrooms, kitchens and support-staff quarters.

- Complete power installation and data points
- Functional and architectural lighting design services
- Comprehensive emergency lighting systems
- Intelligent, remote-operated lighting controls
- Post installation testing and NICEIC certification

“

Kellwood have just successfully completed the replacement of all internal and external lighting...
...working in conjunction with medical staff to ensure no disruption for patients and visitors. All works were carried out to an extremely high standard...
...based on a competitive tender procedure. I would have no hesitation in recommending Kellwood for any project of a similar nature - **R McGowan, Project Manager**
