Sensor Technical Information

3-Step Dimming Function

When used in combination with the 0-10V dimmable LED driver, the M1 microwave sensor can offer 3-step occupancy dimming; 100% light output ---> reduced output ---> off. The sensors also have built daylight sensors, variable hold times and detection sensitivity.

1. If no motion is detected, the sensor does not switch on
2. When motion is detected, the sensor switches on at 100% illumination
3. After the Hold Time passes, and no further activity is detected, the sensor dims to a pre-set output
4. After Standby period passes, the sensor switches the light off

2-Step Dimming Function

The M1 sensor can alternatively provide 2-step occupancy dimming; 100 % light output ---> reduced output (the light never turns off). This functionality is particularly suitable for use in corridors, stairwells and underground passages where low light levels are maintained until motion is detected.
